

TMC114

TMC114 is a type of medicine called an protease inhibitor (PI). PIs work by blocking protease, a protein that HIV needs to make more copies of itself.

HIV/AIDS-Related Uses

TMC114 is an investigational medicine that is not yet approved by the FDA for use outside of clinical trials. It is being studied for the treatment of HIV infection. This medicine does not cure or prevent HIV infection or AIDS and does not reduce the risk of passing the virus to other people.

Dosage Information

TMC114 comes in an oral form. It is being studied to determine whether it should be taken with or without food.

Contraindications

Individuals should tell a doctor about any medical problems before taking this medicine.

Possible Side Effects

Along with its desired effects, TMC114 may cause some unwanted effects. While not all of these effects are known, diarrhea, vomiting, nausea, headache, and skin disorders have been reported. Hepatitis and abnormal liver function tests have also been reported.

Drug and Food Interactions

A doctor should be notified of any other medications being taken, including prescription, nonprescription (over-the-counter), or herbal medications.

Clinical Trials

For information on clinical trials that involve TMC114, visit the ClinicalTrials.gov web site at <http://www.clinicaltrials.gov>. In the Search box, enter: TMC114 AND HIV Infections.
